

# K9 Go Dog—by Animal Naturals

## Ingredients

Glucose polymers (long chain complex carbohydrates), Resistant starch, Resistant starch, Medium-chain triglycerides, Beef Fat, Potassium L-lactate, Sodium L-lactate, O2Boost L-Citrulline, L-Citrulline Malate, D-Ribose, Potassium ascorbate, L-Carnitine, Magnesium orotate, *K9 GoDog Recovery Factors*: Cooked chicken, Cooked beef, L-Glutamine, L-Leucine, L-Valine, L-Isoleucine, L-Taurine, L-Carnosine, ALA (alpha lipoic acid), L-Alanine, L-Glycine, Phosphatidylserine, *K9 GoDog Hydration Factors*: USP Glycerol, Sodium citrate, Potassium citrate, Potassium succinate, *K9 GoDog Antioxidant Factors*: Vitamin E (alpha-tocopherol), Calcium ascorbate (non-acidic source of vitamin C), Grape seed extract, *K9 GoDog Joint Factors*: TMG (trimethylglycine), Chondroitin sulfate, MSM (S-adenosyl Methionine) Sodium hyaluronate (glucuronic acid N-acetyl glucosamine), Choline bitartrate, Calcium Lactate, Pyridoxine HCl, Inositol, Dicalcium phosphate, Zinc L-aspartate, Folic acid, Manganese L-aspartate, Dimethylpyrimidinol sulfate (source of vitamin K), Thiamin monohydrate, Cyanocobalamin (B12), PABA

## Serving Size

1 scoop, 20 grams

## Guaranteed Analysis

Protein..... 4% min  
Fat..... 6% min  
Carbohydrates..... 80%  
Moisture..... 7% max  
Ash..... 3% max

## Feeding

Mix a scoop with fresh water in a 21 oz.

sports bottle and pour into your dog's bowl or let him drink from the bottle. Feed 25% of bottle before exercise, feed at regular intervals during exercise, and feed remainder of bottle within 30 minutes after exercise. Throw away unused portion. Thoroughly wash and disinfect water bottle.

## Guidelines

The company that makes Go Dog originally began producing human endurance sports drinks. They then turned their expertise to animals helping with endurance and nutrition. Only top human grade ingredients are used. No sucrose, fructose, trans fats, corn syrup or by-products are used.

Go Dog is a canine sports drink, which re-hydrates and helps to energize and extend the performance of your dog. This product comes with its own water bottle for convenience on the go. Used as a supplement in your dog's water, Go Dog will improve hydration, heat tolerance and will help buffer lactic acid so that your dog can wear harder and longer with more energy and less impact on a system. Go Dog helps to promote faster and total recuperation.

Go Dog strengthens vital aspects of performance:

**Improves physical performance**—Go Dog increases energy production in slow and fast twitch muscle fibers. Rapid and slow release fuels generate higher muscle ATP, boosting strength and power. Enhanced lactic acid and ammonia clearance reduces fatigue and extends endurance. Finally, enhanced oxygen delivery increases “air” (more V02 max remaining) & raises anaerobic threshold.

**Improves mental performance**—Go Dog raises oxygen/glucose delivery to the brain plus supports neurotransmitters and hydration to help dogs maintain focus even under stressful conditions.

**Prevents muscle “cannibalization”**—Go Dog protects muscles from exercise-induced breakdown and damage. The harder the exercise, the more muscle is broken down for energy, and the more damage. Go Dog contains factors proven to protect canine muscle, ensuring that exercise is beneficial.

**Increases comfort and safety**—Increased oxygen delivery, hydration, and lactic acid clearance makes exercise more fun and comfortable. Go Dog helps prevent Fatigue Related Injury Syndrome occurring in tired dogs. Plus Go Dog helps “beat the heat” in summer temperatures to make exercise safer.

**Promotes better recovery**—Go Dog promotes faster, total recuperation. The result is a fresher, fully recovered dog ready to exercise. Complex carbohydrates recharge muscle and liver glycogen. Adaptogens reduce stress hormones, creatine kinase and toxic free radicals, speeding cellular repair.

## Packaging:

1.25 lb. jug contains 282 suggested servings @ approximately \$0.10 per serving.
